

Success Story

Granite Innovations

THE CHALLENGE

The Granite Innovations building in St. Cloud sought to enhance its aesthetic appeal and functionality with custom glass installations. Key areas, including the grand entrance to the auditorium, mirrors in high-traffic zones, and both exterior and interior vestibules, required a seamless blend of modern design and durable materials. The project called for precision in replacing these glass elements to maintain the building's sophisticated look while ensuring long-term durability and safety.

OUR SOLUTION

Heartland provided custom all-glass and aluminum storefront entrances, designed to meet the client's aesthetic and functional needs. Our tailored approach ensured a sleek look, durable performance, and enhanced security, with seamless installation and precision craftsmanship that elevated the space.

RESULTS ACCOMPLISHED

The project exceeded expectations, delivering both beauty and functionality. The all-glass auditorium entrances added modern elegance, while the aluminum storefront and vestibule showcased precision and durability. Flawless mirror installations in the bathrooms and changing areas completed the polished, cohesive environment, perfectly aligning with the client's vision.
