

Success Story

We Show Up

We Bring It

We Do It Right

Henning School

THE CHALLENGE

Henning School urgently needed to replace its outdated exterior storefront windows, which compromised energy efficiency and security. The existing windows lacked modern break metal headers, critical for structural integrity and weather resistance. With the new school year approaching, a timely solution was essential to enhance the school's aesthetic and ensure a safe, comfortable environment for students and staff.

OUR SOLUTION

Heartland delivered a tailored solution by supplying high-quality aluminum framing combined with custom break metal. This approach not only ensured a sleek and modern aesthetic but also enhanced the overall durability and functionality of the installation. By prioritizing design and craftsmanship, we achieved a clean, professional look that perfectly aligned with the project's vision.

RESULTS ACCOMPLISHED

The installation of these windows received widespread praise for their aesthetic appeal and functionality. They enhance the building's appearance and significantly improve natural light intake, creating a brighter, more inviting atmosphere in the classrooms. This transformation fosters a vibrant learning environment that benefits both students and educators.

WHY WAS HEARTLAND GLASS BEST SUITED FOR THE WORK?

Heartland Glass effectively met the project scope needs with our expertise in high-quality glazing solutions for educational settings. By utilizing premium materials like durable aluminum framing and custom break metal, we ensured the project met top safety and quality standards. Our craftsmanship delivered a seamless installation that enhanced aesthetics and improved energy efficiency and security, providing a reliable solution that created a safe, welcoming environment for students and staff.
